## Overview

---

The project, planned to be developed in two phases, is expected to be fully operational by the second half of 2026. Between 2026 and 2033, several evolving factors are influencing the development and adoption of Off Grid Solar Container Power Systems. These include technological advancements, regulatory shifts, pricing trends, and global economic influences. Pre-fabricated containerized solutions now account for approximately 35% of all new utility-scale storage deployments worldwide. North America leads with 40% market share, driven by streamlined permitting processes and tax incentives that reduce total project costs by 15-25%. This agreement follows the Government of the Commonwealth of Dominica's successful development of the geothermal reservoir in the Roseau Valley.
