

# Compressed air solar container and carbon dioxide solar container

## Overview

---

To assess multi-energy complementarity and commercial development status in thermodynamic energy storage systems, this review systematically examines compressed air energy storage (CAES), compressed CO<sub>2</sub> energy storage (CCES), and Carnot battery (CB), focusing on. Compressed carbon dioxide energy storage can be used to store electrical energy at grid scale. The gas is well suited to this role because, unlike most gases, it liquifies under pressure at ambient temperatures, so occupies a small volume. The system draws CO<sub>2</sub> from an inflatable atmospheric gas holder, stores it, and uses it to produce power again, when demand for stored energy.
