

# Concrete block solar container problem analysis report

## Overview

---

In this research work, the thermodynamic (energy and exergy) analysis of a single slope solar still (SS) without concrete blocks as a sensible heat storage material or SHSM in the month of October 2022 and with concrete blocks in the month of May 2023, was. Metal fibre reinforced concrete have the advantage of increased thermal conductivity due to inclusion of metal fibres. The proposed work is concerned with the experimental setup of a cheaper and economical 2m X 1m solar concrete collector and. With these facts in mind two concrete solar collectors, of one by using heat transfer enhancement technique, dimple surface, of size 2 m<sup>2</sup> were developed, designed, fabricated and tested in Pune. Final report including CRDL-PA8, final design and performance report and economic analysis.
