

Depreciation period of electrochemical solar container

Overview

The Income Tax Law allows companies and individuals to depreciate 100% of expenses on renewable energy equipment in one fiscal period (accelerated depreciation). The Modified Accelerated Cost Recovery System (MACRS), established in 1986, is a method of depreciation in which a business' investments in certain tangible property are recovered, for tax purposes, over a specified time period through annual deductions. For solar projects, the IRS depreciation period typically follows the Modified Accelerated Cost Recovery System (MACRS).
