

Economic model calculation of industrial and commercial solar container

Overview

Based on an industrial park project, this paper solves the proposed model using ILOG CPLEX Optimization Studio (CPLEX) and Genetic Algorithm and calculates the optimal capacity and economic benefits under the strategy of PV power generation and distributed PV energy. Main campus for 16 primary research areas including laboratory-level work in solar, storage, and grid integration technologies. To calculate the Return on Investment (ROI) for Commercial and Industrial (C&I) solar projects, divide the Total Lifetime Savings (energy cost avoidance + incentives) minus Total Lifecycle Costs (CapEx + O&M) by the Net System Cost. The solar container market refers to the industry focused on the design, development, deployment, and commercialization of portable, self-contained solar power units integrated within standard or modified shipping containers.
