

Electricity exported via solar container

Overview

By combining solar panels and storage in solid, mobile shelters, solar-powered shipping containers are providing solar electricity from cities to rural villages around the world, reshaping the generation, transmission, and use of electricity. In short, you can indeed run power to a container – either by extending a line from the grid or by turning the container itself into a mini power station using solar panels. Below is a narrative description of how a solar-powered shipping container is revolutionising the face of access to global energy, off-grid energy, grid backup, and clean development for applications ranging from European building sites to African communities and the rest of the globe. Gain insight into the multitude of applications, from grid support to off-grid independence, that these systems can serve. If you've ever wondered how communities in remote areas or disaster-hit regions keep the lights on without a grid, the answer is increasingly simple: a shipping container solar system.
