## Overview

---

Capacitor solar energy storage operates on the principle of electrostatic energy storage. When solar panels generate electricity during peak hours, the surplus energy charges the supercapacitors. That is why we have developed a mobile photovoltaic system with the aim of achieving maximum use of solar energy while at the same time being compact in design, easy to transport and quick to set up. From portable units to large-scale structures, these self-contained systems offer customizable solutions for generating and storing solar power. It provides clean, efficient power wherever you need it and can also generate profit.
