Overview

The peak regulation model posits the minimum peaking cost of each unit as the objective function. To solve the problem of power imbalance caused by the large-scale integration of photovoltaic new energy into the power grid, an improved optimization configuration method for the capacity of a hydrogen storage system power generation system used for grid peak shaving and frequency regulation is. The present chapter outlines the general components and functions as well as the e ore distant future,hydrogen power plants are to be used. Due to the limited stability and reliabilityof hydrogen storage,it is difficult to meet the high demand for frequency regulation of the power system,so other measures need to be taken to assist in the regulation,increasing the complexity and cost of the system.
