

Immersed liquid cooling solar container technology

Overview

By submerging battery packs directly in an insulating cooling liquid, the technology efficiently absorbs and dissipates heat, ensuring that batteries remain within optimal temperature ranges. This not only extends battery life but also significantly improves the safety of energy. ICEtank liquid-immersion cooled modular data centers from GRC are the answer if you need to add computing power in an out-of-the-way place, on the edge, in harsh environments, or if you want to expand your data center but have run out of space. With technological advancements accelerating at an unprecedented pace, these sophisticated systems are. As 2025 marks the scaling-up milestone set in China's 14th Five-Year Plan for New Energy Storage Development, the industry has entered a new phase.
