**100-430KWH**

**230|400V**

## Overview

---

In 2025, average turnkey container prices range around USD 200 to USD 400 per kWh depending on capacity, components, and location of deployment. But this range hides much nuance—anything from battery chemistry to cooling systems to permits and integration. A new analysis from energy think tank Ember shows that utility-scale battery storage costs have fallen to \$65 per megawatt-hour (MWh) as of October 2025 in markets outside China and the US. In 2025, the typical cost of a commercial lithium battery energy storage system, which includes the battery, battery management system (BMS), inverter (PCS), and installation, is in the following range: \$280 - \$580 per kWh (installed cost), though of course this will vary from region to region.
