

Is the main application area of photovoltaic film in solar container

Overview

Thin films play a critical role in PV in Si and thin film solar cells and solar modules. Thin-film solar cells are a type of solar cell made by depositing one or more thin layers (thin films or TFs) of photovoltaic material onto a substrate, such as glass, plastic or metal. Thin-film solar technology's unique properties make it ideal in several key areas. If you're considering solar solutions for your home or business, knowing these applications can help you decide if thin-film panels fit your energy needs.
