

Lithium titanate high rate battery cells can be used for solar container

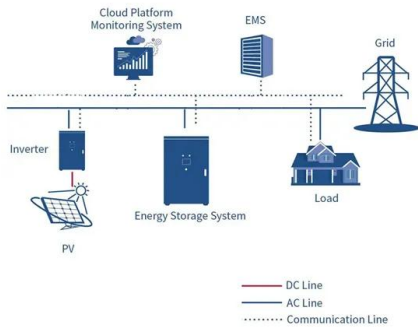

Overview

LTO's high power density makes it ideal for stationary uses like ESS and solar, where long cycle life, fast charging and discharging, and a wide temperature range are crucial. With LTO in ESS/Solar applications, the owner can expect an exceptional cycle life. The cathode is typically Lithium Manganese Oxide (LiMn_2O_4), and the electrolyte consists of a lithium salt dissolved in an organic solvent, similar to other lithium battery. Among the many lithium battery technologies available, lithium titanate battery (LTO) is emerging as a standout option, gaining attention for its exceptional safety and ultra-long cycle life. The lithium-titanate battery, or lithium-titanium-oxide (LTO) battery, is type of rechargeable battery which has the advantages of a longer cycle life, a wider range of operating temperatures, and of tolerating faster rates of charge and discharge [4] than other lithium-ion batteries. During ultra fast charging the cell faces deposition of lithium metal in the form of dendrites or as a high surface area film over the Anode.
