## Overview

---

While short-duration energy storage (SDES) systems can discharge energy for up to 10 hours, long-duration energy storage (LDES) systems are capable of discharging energy for 10 hours or longer at their rated power output. Mido Helmsman utilizes a sophisticated energy storage system that efficiently captures and preserves energy for optimal function. The watch is equipped with an innovative kinetic movement that converts movement into energy, ensuring continuous operation without the need for traditional battery. Maximum solar yield power generated annually with 400 kWh per day as average energy output. I simply rotate the bezel to the country whose time I want at the top, above the 12 o'clock mark. Then press the crown once and voilà, the hands move and set themselves to the time of that country.
