

# **National standard for portable solar container power supply**

## Overview

---

This piece shows how NFPA and UL standards fit together across real use cases. You'll see which listings matter, what tests AHJs request, and how to build an evidence-backed compliance file without over-testing or missing critical gaps. NFPA is keeping pace with the surge in energy storage and solar technology by undertaking initiatives including training, standards development, and research so that various stakeholders can safely embrace renewable energy sources and respond if potential new hazards arise. This Electrical Part is produced and copyrighted by the National Fire Protection Association (NFPA) and is based on the 2020 National Electrical Code ® (NEC ®) (NFPA 70 ® —2020), copyright 2019, National Fire Protection Association, all rights reserved. Temporary or tactical projects: Military field camps, film crews, agricultural projects and pop-up shops often set up in containers. The safe and reliable installation of photovoltaic (PV) solar energy systems and their integration with the nation's electric grid requires timely development of the foundational codes and standards governing solar deployment.
