

# New water solar container technology

## Overview

---

city of Sheffield, new technology uses water and renewable electricity to pull CO2 out of the air. Other companies are already using "direct air capture" machines to help fight climate change. OffGridBox technology caters to households and institutional buildings such as health clinics and schools, it powers productive use, and can be installed in humanitarian settings, like refugee camps or post-disaster situations. The core objective was to reimagine a standard shipping container as a self-contained energy hub, equipped with advanced solar integration, high-capacity batteries, and intelligent power management systems. The Solar Desalination funding program will explore novel technologies that use solar-thermal energy to assist in creating freshwater from otherwise unusable waters like seawater, brackish water, and contaminated water. AET's Hybrid Solar Container provides an integrated off-grid power solution designed specifically for challenging environments.
