

Nuclear power storage coupling

Overview

This report discusses the different options for coupling thermal energy storage (TES) systems to advanced nuclear power plants (A-NPPs) in order to enable flexible and hybrid plant operation. An advanced light-water reactor (A-LWR), a high-temperature gas-cooled reactor (HTGR) and a liquid-metal. The economics of a low-carbon world are different than a world built on fossil fuels. TES can generate new revenue for the nuclear plant and help decarbonize the electricity.
