

# **Power source of giant capacitor solar container**

## Overview

---

When these supercapacitors are paired with solar cells, the result is a solar supercapacitor. This hybrid device captures sunlight, converts it into electrical energy, and stores it for later use with remarkable efficiency. With solar supercapacitors, we can not only reduce our carbon footprint but also pave the way for a more sustainable and resilient energy future. Just had a quick look on ebay, found this: 166 Farads at 48v roughly \$1,000 for a USED capacitor bank. [Jasper Sikken] has developed many projects that take advantage of this power over the years, and has just completed his latest solar harvesting module for powering microcontroller. While lithium-ion batteries dominate headlines, capacitors offer unique advantages for solar applications: "Capacitors act like sprinters in the energy storage marathon – quick to react, endlessly durable, and perfect for handling solar's daily power surges.
