

# Principle of dynamic capacity expansion of solar container cabinet

## Overview

---

New modular designs enable capacity expansion through simple container additions at just \$210/kWh for incremental capacity. These innovations have improved ROI significantly, with commercial projects typically achieving payback in 4-7 years depending on local electricity rates. What is a capacity expansion model for multi-temporal energy storage?

This paper proposes a capacity expansion model for multi-temporal energy storage in renewable energy base, which advantages lie in the co-planning of short-term and long-term storage resources. At high storage penetration levels, storage capacity valuation becomes important. SOFAR Energy Storage Cabinet adopts a modular design and supports flexible expansion of AC and DC capacity; the maximum parallel power of 6 cabinets on the AC side covers 215kW-1290kW; the capacity of 3 battery cabinets can be added on the DC side, and the capacity expansion covers 2-8 hours.
