

# Ring main unit solar container method

## Overview

---

Evacuated tube solar collector absorbs part of the solar radiation which strikes the outer glass tube. Our solar solution essentially covers three main components: a ring main unit, a transformer and a low voltage board. Ring Main Units are compact modules that are gas-insulated and sealed, comprising main switching devices and ancillary components to ensure continuous secondary power distribution. In the rapid growth of new energy applications, such as photovoltaic (PV), energy storage (BESS). When these units keep voltages within safe ranges, they help make sure electricity keeps flowing smoothly into the grid without interruptions.
