What is the purpose of the `self` parameter? Why is it needed?

For a language-agnostic consideration of the design decision, see What is the advantage of having this/self pointer mandatory explicit?. To close debugging questions where OP omitted a self ...

Difference between 'cls' and 'self' in Python classes?

Why is cls sometimes used instead of self as an argument in Python classes? For example: class Person: def __init__(self, firstname, lastname): self.rstname = firstname self.

What does ".self" actually do in Swift/SwiftUI?

I think it is setting the id for each list item as each item in the numbers array? Correct me if wrong - but is each id being set as whatever Int is in each entry of the numbers array? If so, then

...

php

self - This refers to the current class name. So self::baz() is the same as Foo::baz() within the Foo class (any method on it). parent - This refers to the parent of the current class. static - This refers to the ...

dotnet publish --self-contained -> running the app still asks for

15 As the subject suggests, even if publishing with "--self-contained true" (and with a specific -r option), the runtime still asks for missing installation.

oop

By making the self reference explicit, you're free to refer to any object by that self reference. Also, such a way of playing with classes at runtime is harder to do in the more static languages - not that's it's ...

¿Para qué sirve Self y This en PHP?

quería saber el uso de estos dos y sus diferencias. He visto que tienen un uso parecido, pero lo que he visto no explican realmente cuál es mejor usar y por qué.
