## Overview

---

As developers and utility infrastructure work to keep pace, solar energy is increasingly becoming a central player in the conversation of how data centers will get powered at scale, behind the meter. Data centers, which were previously niche industrial facilities, are now among the fastest-growing sources of electricity demand, with Texas specifically leading the charge on both power demand and computing growth in the US. (Source: Boston Consulting Group) The explosive growth of Artificial Intelligence is forcing a fundamental realignment of the. Operators are now under mounting pressure — from governments, investors, and the public — to decarbonize.
