

Solar container frequency regulation ancillary service policy

Overview

This paper describes the frequency control ancillary services (FCAS) that value the response speed of the frequency control resources and/or can only be provided, without curtailing available renewable energy, by inverter-coupled generation or storage technologies. From innovative battery technologies to intelligent energy management systems, these. This report has been developed by ERCOT as part of the Ancillary Services Study to assist the Public Utility Commission of Texas (PUC) in meeting the requirements of Public Utility Regulatory Act (PURA) § 35.
