

# **Solar container graphene concept**

## Overview

---

In addition to its kinetic properties, graphene exhibits remarkably high electrical conductivity and optical transparency, making it a suitable material for solar cells. 24,25 Graphene-silicon Schottky junction solar cells form a photovoltaic interface that enables. The solar cells combine multilayer graphene with silicon wafers, harvesting both solar and kinetic energy for continuous operation. A recent study by researchers from the University of Arkansas and the University of Michigan demonstrates how graphene-silicon solar cells can serve as an efficient and stable power source for an ultra-low-energy temperature sensing platform. Our systems respond in real-time, flattening demand curves and helping you avoid painful surcharges.
