

Solar container type experiment

Solar container type experiment

How to Make a Solar Still - A Simple Water Purification Science Experiment

This DIY solar still experiment is a fantastic way to teach kids about the water cycle, especially evaporation and condensation, while also introducing concepts of solar energy and survival science.

Solar Water Disinfection Experiment

Learning how sunlight can purify contaminated water reveals a simple, eco-friendly method that could transform access to safe drinking water worldwide. To perform a solar water ...

How to Make a Solar Still: Simple Solar Experiment

Solar stills are simple devices that can be built using easily available materials, making them an ideal solution for areas where clean water is scarce. They are also very efficient, with some models able to ...

Family Science

Topics: Separating Mixtures Activity: Separate the water from solutions using evaporation.
Location: Outside. o Make sure you have access to a safe outdoor area on a sunny day. o Gather materials. o ...

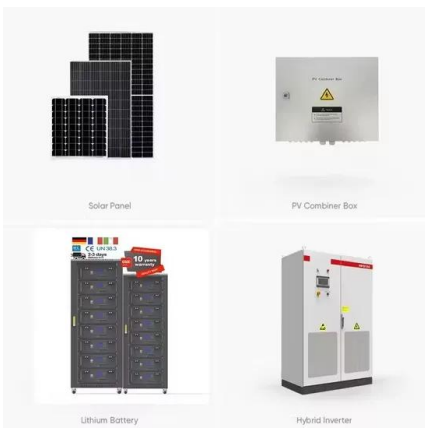

Solar-Powered Water Desalination , Science Project

Solar-Powered Water Desalination Science Project: Build and test a solar-powered device for desalinating water and investigate how the color of the bottom of the device affects its efficiency.

Survival Still

By creating a closed space with a transparent cover material, a greenhouse effect is produced which causes the temperature inside the space to rise. The trapped heat is absorbed by the soil and ...

Years 6 and 7 science Solar still activity

In this activity2, students create a solar still and use a predict-observe-explain strategy to investigate how coloured salty water transforms into clear unsalted water. Different versions of a solar still can ...
