

# The device cannot start after solar container

## Overview

---

There's a few solutions in that post - I've added '--no-healthcheck' as an extra parameter to the container using the Nvidia runtime and haven't had the issue show up again. Here are the error messages: Aug 28 09:30:39 galaxie8 systemd [1]: Starting PVE LXC Container: 205. The error is: docker: Error response from daemon: failed to create shim task: OCI runtime create failed: runc create failed: write. "Inverter won't turn on" means the LCD of the inverter is blank, the LEDs above the LCD are not working at all, and the inverter is not generating power. Whether you're operating off-grid, offering disaster relief, or just looking for an all-around renewable energy option, mobile solar containers are hard to beat. These behemoths jam solar panels, inverters, batteries, and control systems into a shipping container that you can access anywhere.

## The device cannot start after solar container
