

# Ultra-high voltage solar container transmission

## Overview

---

More than a million volts carrying the equivalent of 12 large power stations worth of power down a single line?

Such a feat should be unthinkable. Ultra-High Voltage Direct Current (UHVDC) electricity transmission ought to be the stuff of pure science fiction. High-voltage power transmission systems are more important today than ever before because power generated at renewable energy sites in remote locations must often be transmitted to distant load centers. Developed by the State Grid Corporation of China (SGCC), the project stretches 915 kilometers from.
