

# Vanadium flow solar container

## Overview

---

Self-contained and incredibly easy to deploy, they use proven vanadium redox flow technology to store energy in an aqueous solution that never degrades, even under continuous maximum power and depth of discharge cycling. Modular flow batteries are the core building block of Invinity's energy storage systems. CellCube's Vanadium Flow Battery technology, with over +14 years of proven performance in diverse applications worldwide, stands as the certain choice to meet these evolving needs effectively. The tanks of reactants react through a membrane and charge is added or removed as the catholyte or anolyte are circulated. The large capacity can be used for load balancing on grids and for storing energy from. These large-capacity energy storage systems charge and discharge electricity by circulating electrolyte through the battery using pumps.
