

# What does the solar container type of inductor mean

## Overview

---

They are used in solar inverters to convert the direct current (DC) generated in photovoltaic panels into alternating current (AC) and stabilize the energy produced. Common types and characteristics of solar container inductors

Common types and characteristics of solar container inductors Common mode noise occurs simultaneously on both lines of a conductor pair with respect to a common ground, whereas differential noise occurs between conductor paths. It is a component that can convert electrical energy into magnetic energy and store it. It consists of a number of turns of fine wire of copper wound on a core of some material (air, iron, powdered iron).
