

Where are china s solar container sites

Overview

Some of the largest projects under development are in the Inner Mongolia region in northern China. The 277 GW of utility-scale solar capacity installed in China in 2024 alone is more than twice as much as the 121 GW of utility-scale solar capacity installed in the United States at the end of 2024. More recently, its dune fields have become a sea of photovoltaic possibility, transformed by a surge of newly installed solar panels. The construction is part of China's multiyear plan to build a "solar great wall" designed to generate enough energy to power Beijing.
