

Why is the portable solar container pack only 12 volts

Overview

Your portable pack essentially mimics your car's outlet—so your gear works seamlessly both on-road and off-grid. ☐☐ Device Harmony☐Most USB gadgets (phones, tablets, LED lights) operate at 5V, but 12V systems can efficiently step down voltage using built-in converters. This voltage is the universal handshake between portable power stations and everyday devices. Here's why it works: ☐☐ Car Culture Legacy: Modern 12V systems evolved from automotive batteries, which power everything from air pumps to mini-fridges. Whether you're looking to electrify your RV, boat, or small off-grid cabin, a 12V solar system might be the perfect solution. Depending on the model, it can be charged via solar panels, wind generators, a 120-volt household plug or a 12-volt car outlet. Can someone explain to me why a portable power station (Bluetti, Jackery, VTOMAN etc) isn't the best choice for an offgrid solar cabin?

I can't build a system with charge controller, inverter and lithium battery (of equivalent storage) for what these units cost.
